CLA200 - A14	17.5" long	Amber low beam	2600 lumens

EXCLUSIVE LOW-BEAM LENS DIRECTS FLOOD LIGHT OUT AND DOWNWARD.

Low beam light projection on a typical 8' (2.5 m) high apparatus will provide forward coverage up to 150' (45 m) and side coverage to 60' (18 m) wide.

CrestLight low profile LED scene lights provide the flexibility to offer the proper light for the job. The CrestLight is a combination of three different lights, white narrow flood, white low beam, and amber DOT markers.

TELESCOPIC TRIPODS

TWISTLOCK TELESCOPIC TRIPODS

The Industry's Finest Tripods with the Best Features:

- **TwistLock** – FRC's unique locking ring operates from either direction. It is simply the best way to deploy a light with the gloved hand!
- **Air Cushioned pole release** – This innovation allows the pole to lower slowly, when released, on a cushion of air. This helps to prevent pinched fingers and damage to the bulb.
- **Ease of set-up** – FRC tripods are designed to deploy all three legs at the same time, allowing the unit to be set up quickly and easily at an incident.
- **Lightweight anodized aluminum poles** – The standard tripod weighs just 16 pounds!
- **Extends up to 12 feet!** – Fire Research tripods are designed to permit "overextension" of its legs so the tripod's lamphead can reach this incredible height.
- **Cammed knobs** – The pole tightening knob will not unscrew or come off due to vibration.
- **Anti-chatter legs** – Rubber covers at the bottom of the legs ensure a quiet ride.
- **Small footprint** – When closed the unit sets into an incredibly small lower bracket allowing ease of mounting just about anywhere!
- **Truck mountable** – All tripods are truck mountable, allowing them to be used as telescoping lights on the vehicle and off!
- **Wire Guard** – As shown is standard.

KR-SB-600 FIXED TOP MOUNT

The KR-SB-600 fixed top mount includes a two-piece locking collar and is designed to allow for easy 360 degree rotation.

- Also available with clamping lever (KR-SB-600-L)

EVOLUTION II with fixed top mount

570 FIXED TOP MOUNT

More than a simple top mounted base, the 570 allows for a full 450° of rotation. This means that light coverage can be a full circle, plus another quarter turn which ensures no blind spots. The 570 base has a built-in stop to prevent the internal wiring from binding.

A built-in friction mechanism ensures the light will not rotate when the vehicle is in motion.

EVOLUTION II with fixed side mount

SPECTRA with fixed side mount

580 FIXED SIDE MOUNT

The 580 side mounted, fixed pedestal light allows the lamphead to rotate 450° and has a self adjusting friction brake to prevent arbitrary rotation.

The pedestal has around mounting base attached to a side mount bracket.

SPECTRA lampheads use a 2.75" bracket.

EVOLUTION II lamphead uses a 3.5" bracket.

FOCUS

NO SCRATCH GUIDE & RUBBER BUMPERS PREVENTS SCRATCHING & DENTING

The No-Scratch option combines a guide collar and guide rail assembly, a steady-rest bracket, and two rubber bumpers on the lamphead (FOCUS & EVOLUTION II only) to prevent scratching and denting of apparatus body surfaces. The complete No-Scratch option is available on 530 side mount, bottom raise, telescopic pole.

When the pole is raised the guide collar disengages from the guide rail and the lamphead is free to rotate 360°. As the pole is lowered the guide collar engages the guide rail. The guide collar and rail prevents the pole from being lowered if the lamphead is not correctly aligned.

RUBBER BUMPERS

Rubber Bumpers are available as an option on most FOCUS and EVOLUTION II lampheads

RAISED POLE INDICATOR & SWITCH

In order to alert the vehicle operator that an extendable pole is raised, FRC offers a switch and indicator option for all permanently mounted telescopic poles. The parts associated with this option will differ depending upon the type of pole in question.

Note: To retrofit this option the type of pole being used needs to be specified when ordering.

If retrofitting this option on a 530 push-up pole the steady rest lower bracket is required.

WIRE GUARD

When retrofitting a wire guard on a FOCUS lamphead not originally fitted with one order the FC150-S or FC150-M kit. Wire Guards are not available on Model 200, 230, and 250 recessed mounts.

ON/OFF LAMPHEAD SWITCH

On SPECTRA, EVOLUTION II and FOCUS lampheads a switchbox is provided underneath the lamphead.

ON/OFF LAMPHEAD SWITCH

CUSTOM LENGTH POLE

FRC telescopic poles can be shipped pre-cut to a custom length. Total length will include pole and lamphead.

(Some restrictions apply)

WIRE EXITS FROM TOP OF POLE NON-CONCEALED WIRE

For most permanently mounted lampheads the power cord exits through the bottom of a pole assembly. Specifying this option will bring the power cord out of the top of the pole or lamphead.

LEDs Produce More Light

A quartz halogen bulb utilizes 8% of the energy supplied to produce light. By comparison, LEDs use 40% of the supplied energy to produce light.

LEDs Are More Efficient

Different types of light sources that use the same amount of power (watts) can have very different luminous efficacy (lumens/watt) and therefore different lighting efficiency.

LEDs Outlast Traditional Bulbs

- The typical operational life of an LED is 50,000 hours compared to the average life of an incandescent bulb, which is approximately 2,000 hours.
- LEDs can operate well past the lifetime of the average apparatus.
- Because of their inherent solid state design without filaments, LEDs are much more rugged than incandescent bulbs and can better withstand shock and vibrations.
